Heart disease is the number one killer in America. And 12 million Americans use cholesterol lowering medication to tackle it.

But our research has uncovered a doctor in Arizona who is tackling it a different way.

His records show that he has a 100% success rate. They indicate that he's never lost a patient to stroke or heart attack in 20 years.

We review his research and his unique therapy which uses a three-step process for purifying your blood and healing your heart.

At the heart of his therapy are three all-natural enzymes and minerals which cleanse the blood and strengthen heart health.

This report investigates each of these and reviews how they work on the human body.

The doctor behind this therapy is Dr. Garry Gordon. And according to him...he discovered this therapy through using himself as his own case study.

He had a history of illness and spent years researching and experimenting to improve his own health. And according to his notes he did just that. But along the way he developed this new therapy which tackles heart health in a completely new way.

And he's enjoyed remarkable success using this therapy with his own patients.

An Inflammatory Idea About Heart Disease

You wouldn't wash the dishes in muddy water, would you?

Of course not. It just wouldn't work. Everybody knows that.

And yet, for some reason, most doctors still try to cure heart disease without clean blood. It doesn't work for the same reason that your dishes don't get clean.

In most cases, heart disease isn't caused by faulty arteries, but rather by problems in your blood.

Up to 85% of heart attacks are caused by blood clots, not the plaque that shows up on CAT scans and in arteriograms.

Nevertheless, doctors in traditional and alternative medicine continue to focus on plaque and cholesterol. But few of them have the track record of the doctor our research team found in Arizona.

Dr. Garry Gordon, M.D., D.O. has been practicing medicine since 1958.

He literally wrote the book on omega-3 fatty acids, *The Omega-3 Miracle*. He's the cofounder of the American College for Advancement in Medicine (ACAM) and an advisor to the American Board of Chelation Therapy.

Dr. Gordon also designed an innovative approach to curing heart disease. Since beginning his therapies over ten years ago:

- He's never had a patient need bypass surgery, despite treating several with almost fully-blocked arteries.
- Patients who follow his advice are able to live more active lives.
- And they're less likely to suffer from Alzheimer's, have a stroke, or develop cancer.

Dr. Gordon is his own best case study.

As a child, he suffered from extreme sickness and weakness. Much of this was caused by his early-onset heart disease. As a teen, he could barely walk up a flight of stairs.

Despite the best medical attention, no one was able to help him.

So he studied. And his studies not only saved his life, they brought him extraordinary energy that he has maintained well into his 70s.

You see, Dr. Gordon is no longer weak or sick. He's one of the most active and healthy "seniors" you'll ever meet. In fact, he's healthier than many people a quarter of his age.

At 74 years old, one of his favorite pastimes is riding his bicycle... Up and down the mountains in the Sonoran Desert.

Since he spent the first half of his life too sick to enjoy himself, he's not going to spend the second half worrying about what he eats or what he can do.

And neither are people who use his system.

Heart disease is America's #1 killer. It's held that spot for decades despite the fact that tens of millions of Americans now take dangerous cholesterol-lowering drugs every day.

You see, cholesterol isn't really the problem.

According to Dr. Gordon, it's really infection and inflammation (and invisible "vulnerable plaques") that cause heart attacks. And you can't treat any of those with surgery, which is why heart surgery patients don't have a significant reduction in heart attacks or cardiac-related deaths.

So how do we treat inflammation?

With Dr. Gordon's simple three-step process. Using his system, you can turn your blood cells into a disease-cleansing army.

The Safe, All-Natural, Ultra-Effective Anti-Inflammatory from Europe

The first step in Dr. Gordon's three-part process for treating heart disease at the source is taking a daily dietary supplement called Wobenzym.

Wobenzym is an over-the-counter anti-inflammatory drug produced in Germany. In that way, it's a lot like aspirin. But unlike aspirin, it may actually help protect your heart.

The problem is that taking aspirin comes with a lot of side effects. It's one of the most widely used medications in the world. An estimated 40,000 tons of it are consumed every year.

It also hospitalizes 76,000 people per year. It kills another 16,500 per year.

Aspirin can cause severe kidney problems and gastrointestinal problems. Chronic aspirin use often leads to bleeding and ulcers.

Fortunately, that's where Wobenzym comes in.

Wobenzym is made from a combination of several different enzymes found naturally in plants and animals.

Enzymes are basically the motors that make chemical reactions go. You need them if you want to make anything happen in your body. Your entire metabolism depends on enzymes, as does almost every other physiological process.

Wobenzym is an all-natural anti-inflammatory. More than 100 million people throughout Europe have used it over a 30-year period with no reported side effects. It has never caused a single death.

In that same time, aspirin and its ilk have killed almost half a million people.

Wobenzym isn't just effective. It's much, much safer.

And that's why it's the first step in Dr. Gordon's system to cure heart disease.

The Tofu-Based Blood Clot Buster

The next step in Dr. Gordon's system is another enzyme with a different but equally remarkable purpose.

This amazing substance, first discovered in fermented tofu in Japan, chews away at any hidden blood clots.

As Dr. Gordon has said, "It is more potent than the clot-busting intravenous drugs we use [in the hospital]; yet, paradoxically, it is completely safe."

In lab tests, you can actually watch under a microscope as this amazing substance searches the blood and breaks down dangerous clots that your doctor may not even be able to find.

It's called Rutozym.

Rutozym was developed by Dr. Karl Ransberger after a trip to Japan. He isolated the enzyme nattokinase, which is found in fermented soy cheese, and added several other anti-inflammatory enzymes.

The result is a product that:

- Fights inflammation
- Improves overall circulation
- Improves the condition of blood vessels
- Improves overall health

Many experts believe that the low rate of heart disease in Japan is because of nattokinase, which is a staple of their diet.

Unfortunately, many Westerners find the fermented soy product completely revolting.

Even native Japanese will often admit that it is an "acquired taste."

Rutozym circumvents the problem. It allows you to enjoy the same cardiovascular health as the Japanese without having to stomach their more unusual culinary delicacies.

By taking Wobenzym and Rutozym simultaneously, you:

- Decrease overall inflammation around the body
- Ensure that inflammatory responses are quick, targeted, and maximally efficient
- Increase the strength of the blood vessels themselves
- Remove plaque buildup

Remember, it's the plaque you can't see that kills up to 50% of Americans.

Rutozym eats away the invisible vulnerable plaque that causes up to 85% of heart attacks. And once it's gone, you never have to worry about it again.

That brings you to the third step of Dr. Gordon's process.

The Million-Year-Old Volcanic Mineral That Can Detox Your Blood

It's scary but true. We're literally eating heavy metals every day. They're in our food, in our drinks, and even in the air we breathe.

It's well documented that today we're born with 1,000 times more lead in our bones than anyone had just 400 years ago. To protect against poisoning, our body traps as much of these heavy metals as it can with calcium deposits and stores them in our arterial walls.

That means we have an excess of these protective calcium deposits that have hardened our arteries.

Normal arteries stretch and contract in order to force blood around the body. The formation of calcium deposits impairs that elasticity and severely disrupts normal circulation. That's a big problem.

Fortunately, Dr. Gordon has a solution.

He uses a substance made from a million-year-old volcanic rock called zeolite.

It's a negatively charged mineral with a unique structure featuring millions of little "chambers."

The negative charge on this mineral literally pulls the heavy metals out of the calcium in your arteries, traps them perfectly in its chambers, and transports them safely out of your body.

That kind of treatment is called "chelation," which comes from the Greek word for a crab's claw.

Heavy metals like lead and mercury are a major cause of inflammation. Left untreated, they can destroy your arteries.

However, zeolite acts like a magnet to pull them out of their hiding places. Its millions of little chambers "cage" the prisoners and march them out for safe excretion.

There may not be much we can do about the heavy metals in the environment. But there's definitely something we can do about the ones in our arteries.

Putting It All Together

As we explained, most heart disease is caused by inflammation. That's why Dr. Gordon's three-step system is so effective. It gets right at the cause of the problem.

- Wobenzym is a safe, all-natural, and ultra-effective anti-inflammatory with no risks or side effects.
- Rutozym is an all-natural clot-buster that eradicates the invisible plaques that cause up to 85% of all heart attacks.

- And zeolite reverses the effects of accumulated poisons from our toxic modern environment, putting the spring back in your arteries and in your step.

By using all three, you can turn your blood into a disease-cleansing army. And having clean blood is the only way to cure heart disease.

Just ask Dr. Gordon.

If you can catch up to him.
